EDUCATION

Anurag University, Hyderabad (2022 – 2026), B.Tech CSE, CGPA: 9.00 (7th Sem)
Jawahar Navodaya Vidyalaya, Rangareddy (2020 – 2022), 11th–12th (PCM), 86.2% (CBSE)
Jawahar Navodaya Vidyalaya, Warangal (2015 – 2020), 6th–10th, 93% (CBSE)

EXPERIENCE

Programme Analyst Intern — Cognizant

Feb 2026 – Present

Digital Nurture 4.0 (GenC Next) — SDET | Chennai (Siruseri), India

- **Part 1 — Full-Stack Development (Completed):** Completed hands-on training in HTML, CSS, JavaScript, Java, MySQL, Maven, Spring, Spring Boot, and Angular covering frontend fundamentals, relational database design, and end-to-end RESTful service development with the full Spring ecosystem.
- **Part 2 — Test Automation (In Progress):** Completed functional testing fundamentals and Selenium for browser automation. Currently progressing through TestNG, Page Object Model, Cucumber (BDD), Apache POI for data-driven testing, and API testing of RESTful services. LoadRunner, JMeter performance testing and CI/CD integration with Git and GitHub scheduled in upcoming weeks.

TECHNICAL SKILLS

Languages:	Java , Python, JavaScript, MySQL, HTML / CSS
Frontend & Frameworks:	React, Angular, Spring Boot, Spring MVC, Spring REST, Spring Security, Spring Data JPA , FastAPI, Maven, Spring Core
AI & Generative AI:	RAG Pipelines, LangChain, LangGraph (Agentic Workflows), Prompt Engineering & Structured Outputs, Spring AI, Google AI Studio, LLMs & Embeddings
AI Coding & Evaluation:	Claude Code, GitHub Copilot, RAGAS, ChromaDB, Sentence-Transformers, Structured JSON Logging, AI Quality Metrics, Fallback & Degradation Strategies
Cloud & DevOps:	AWS, GCP, Docker, Git, GitHub, CI/CD Pipelines
Databases:	MySQL, MongoDB, Redis
Testing & QA:	Selenium, TestNG, Cucumber (BDD), Apache POI, Page Object Model, API Testing , JMeter, LoadRunner

PROJECTS

BreatheSmart — AI-Native Air Quality & Health Intelligence Platform

GitHub

React 19 • Spring Boot 3.5 + Spring AI • FastAPI • LangChain • LangGraph • ChromaDB • Gemini Pro • Google AI Studio • MongoDB • Docker Compose

- **RAG Pipeline with Dual-Scope Retrieval:** Built a full LangChain RAG pipeline over a global corpus (WHO Air Quality Guidelines, EPA AQI standards, AHA cardiovascular docs, NHLBI asthma protocols) and a user-scoped corpus of uploaded medical reports — both stored in ChromaDB with sentence-transformer embeddings. Retrieval combines global + per-user chunks before prompting Gemini Pro, returning grounded recommendations with source citations visible in the UI.
- **LangGraph Agentic Workflow:** Implemented a StateGraph agent with two tools, a live AQI fetcher and a RAG recommendation tool using a conditional should_continue edge and recursion_limit=8 guard. A dedicated AgentAnalysisPanel in the React frontend renders the full tool trace and reasoning steps for transparency.
- **Spring AI + Java Orchestration:** Integrated Spring AI ChatClient for daily air quality digest. RagService proxies calls to the FastAPI microservice via WebClient with JWT-secured endpoints, timeout retry logic, and a deterministic fallback on LLM failure. Apache Tika + Gemini classifier validates uploaded medical reports before ChromaDB ingestion.

- **AI Evaluation & Observability:** RAGAS evaluation script measuring context relevance and answer faithfulness across 10 test queries. Every /recommend call emits a structured JSON log (rag.events) recording request_id, query, retrieved chunks, similarity scores, and latency_ms for cost monitoring and cross-service tracing.
- **Dockerized Microservices:** Three-service Docker Compose stack (Spring Boot + FastAPI + MongoDB) with shared network, volume-mounted ChromaDB, and health checks. Path traversal guard and user-id mismatch check (403) protect the report upload pipeline.

ProjectSphere — AI-Augmented Project Management Platform GitHub

Angular • Spring Boot • Spring Security (JWT) • MongoDB • FastAPI • LangChain • LangGraph • ChromaDB

- **Full-Stack Enterprise App:** Jira-like platform with Angular frontend, Spring Boot REST APIs, JWT auth, and MongoDB consolidating defect tracking, sprint planning, and user story management in a single enterprise-grade app with role-based access control.
- **NL Query Engine (AI Sprint — In Progress):** Designing and owning the AI microservice FastAPI + LangChain RAG pipeline embedding tasks, defects, and user stories into ChromaDB. A LangGraph routing agent autonomously decides which tool to invoke based on query intent. semantic vector search for contextual queries, structured DB lookup for filter-based queries, or direct Spring Boot API calls for action-oriented requests (e.g. 'What user stories do I need to complete today?' vs 'Show all critical defects assigned to me').
- **Architecture & API Design:** Defined the AI service API contract and data-flow spec; documented RAG vs direct-DB routing trade-offs, tool-calling patterns, and model selection rationale in the architecture decision record.

AuConnect — Organizational Networking Platform GitHub

React • Spring Boot • Spring Security (JWT + OAuth2) • Spring Data JPA • Hibernate • MySQL • MongoDB

- **Full-Stack Social Platform:** University-wide networking platform for Anurag University domain-based email verification (@anurag.edu.in), user profiles, real-time messaging with file attachments, post feeds, events, and a freelance marketplace.
- **Backend Architecture:** Modular Spring Boot backend with service/controller/repository separation. JWT + OAuth2 for stateless auth, Redis for caching and pub/sub, Hibernate + Spring Data JPA for relational data, MongoDB for unstructured content.
- **Scalable Engineering:** Connection graph (send/accept/reject/disconnect), real-time WebSocket messaging, Spring Scheduler for event reminders, SonarLint/SonarQube for code quality built with future microservices migration in mind.

CERTIFICATIONS

- Google Cloud Data Analytics Certificate — Google
- Oracle Certified Foundations Associate — Oracle
- Developer and Technology Job Simulation — Accenture
- Software Engineering Job Simulation — Hewlett-Packard
- Infosys Springboard — Machine Learning, Cloud Computing, Cyber Security, Big Data, Design Thinking
